

# Product presentation

## fteu® cone filters

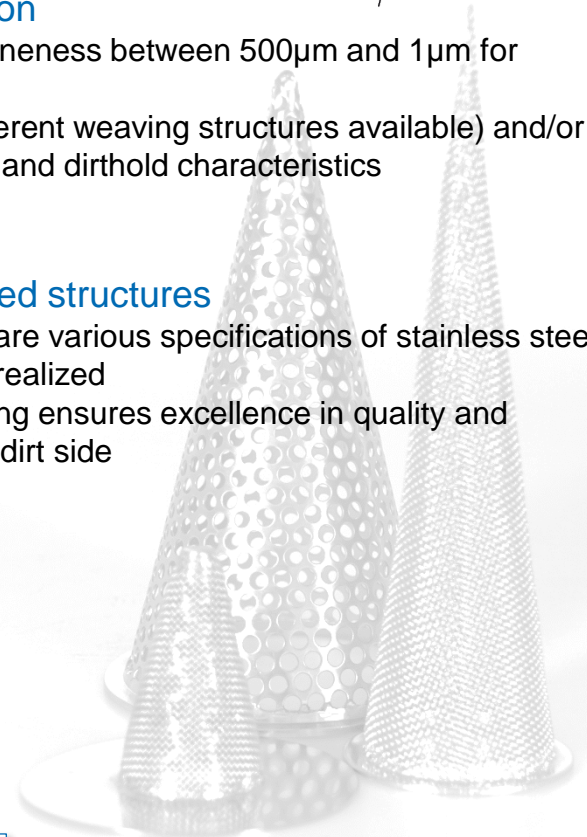

### Optimized filtration and dispersion

- **Fineness:** customized filtration fineness between 500µm and 1µm for each layer
- **Flow:** media of wire mesh (6 different weaving structures available) and/or metal fibre felt for optimized flow and dirt hold characteristics

### Maximized uptime through pleated structures

- **Material:** our standard materials are various specifications of stainless steel; other material, i.e. brass, can be realized
- **Precision:** precision manufacturing ensures excellence in quality and accurate separation of clean and dirt side
