

Product presentation

fteu® optical metal mesh solutions

Excellence in haptics and optics through applied engineering

- **Material:** metal mesh is resistant to extreme demands concerning temperature, pressure, and chemical reactions
- **Accuracy:** we select metal mesh with superior characteristics with regard to openness, optics, haptics, and manufacturing accuracy
- **Burr-free:** we create solutions for you that are burr-free and free of optical and haptical defects

Precision manufacturing with state-of-the-art technology

- **Technology:** we use and continuously develop state-of-the-art technology for the precise manufacturing of metal mesh to achieve excellence in manufacturing quality
- **Expertise:** as specialist for metal mesh solutions we apply our experience to create solutions for your demands that exploit the benefits of metal mesh

Collaborative development

- **Customer demands:** your demands and the understanding of your application are the basis for the development of your metal mesh solutions
- **Development speed:** we are your partner from first prototype through trial series until the series product with stable quality parameters for your series application
